Summary

Computer Engineering student with experience in backend development, AI agents, and automation workflows. Skilled in Python, JavaScript, Flask, React, SQL, and Solidity. Hands-on with cloud infrastructure and Bash scripting. Passionate about building scalable and secure software solutions.

SKILLS

- **Languages & Frameworks:** Python, JavaScript, Java , Flask, Node.js, React.js
- **AI & ML:** NLP (TF-IDF, embeddings, vector DBs), RAG, Agentic AI, Multi-Agent Workflows, Prompt Engineering
- **Cloud & DevOps:** GCP (VM setup, VPC, firewall), Linux/Bash
- **Databases & Blockchain:** MySQL, PostgreSQL, MongoDB
- **Tools & APIs:** Git, GitHub, Bitbucket, REST APIs, Automation Pipelines, n8n

EDUCATION

Vishwakarma University **Pune, MH, India**

Bachelor of Technology (Computer Engineering) | CGPA: 7.9 | Sem6 - SGPA: 9 (latest) **Aug 2022 – Present**

Experience

Agentic AI Developer Intern | Zeeplework July **2025 – Present**

- Built AI agents and multi-agent workflows to automate internal processes and operational pipelines.
- Developed backend APIs, workflow logic, and data-processing modules, end-to-end automation.
- Designed agent workflows including multi-step task execution, decision-making logic, and prompt engineering for AI-driven agents.
- Migrated infrastructure across VMs and ensured smooth deployment of workflows.

AI Software Development Intern | EduPlusCampus (UDNAV Software Services Pvt. Ltd.) **June 2024 - Dec 2024**

- Developed a blockchain-based system using Ethereum for issuing, storing, and verifying academic credentials
- Implemented secure smart contracts in Solidity ensuring 100% tamper-proof verification
- Ensured transparency and immutability in credential verification

Projects

Secure User Registration System | [Link]

- Created a secure registration and login system with Flask and MySQL, including role-based access control
- Prevented over 90% of malicious login attempts (XSS, SQL Injection, etc.)
- Reduced system vulnerability by 80% through security hardening

AI Conversational Agent with Real-Time Web Search| [Link]

- Built an AI Conversational Agent with Real-Time Web Search using LangChain, Groq LLM, SerpAPI, and tool-calling.
- The agent supports multi-turn memory, autonomous tool selection, and dynamic web retrieval for accurate, context-aware responses across real-time queries like weather, news, and factual data.
- Optimized prompt engineering and agent workflow for faster and more relevant outputs.
